

Cost effective open source innovative enterprise collaboration and community functionality drives success

Just as social networking, blogs and forums are changing the way consumers connect, share information and make buying decisions, Enterprise 2.0 technologies and business processes are beginning to free workforces from the constraints of traditional communication and productivity tools. As a result, employees are accessing information faster, collaborating across the enterprise with greater ease, and gaining a competitive advantage through increased productivity and flexibility.

Enterprise Portal Solutions for Our Clients

1Tech addresses today's workplace challenges with Enterprise Collaboration and Community (ECC) Solutions that enable organisations to transform traditional, static intranets into dynamic, collaborative work environments through an array of open source portal and user generated content functionality. By connecting employees with each other, and with customers and other stakeholders through open source collaboration and community-building tools, 1Tech helps increase workflow efficiency, facilitate knowledge sharing and, ultimately, drive innovation and business value.

Enterprise Collaboration and Community Solutions by 1Tech transform employee communication into a strategic advantage. Managing projects and facilitating open communication between partners and customers, and across multiple departments and physical locations, requires a strategic approach to collaboration and community functionality. 1Tech's uniquely tailored open source solutions enable innovation and project success through best-of-breed tools and seasoned development expertise. 1Tech's deep experience across multiple vertical markets results in accelerated problem/resolution cycle times, rapid customisation and optimal ROI.

Open Source Portal Solution v Proprietary

No need to pay for license fees, applications infrastructure and reduced customisation timeframes.

Keep it for low TCO

When you choose our open source portal solution Liferay your organisation benefits from an exceptionally low total cost of ownership.

While other portals make you pay for additional features, Liferay Portal comes with over 60 tools, over 20 themes, and a number of developer tools. We provide you with as many resources as possible to accomplish whatever it is that you want to do (web publishing, collaboration, social networking, administration, etc.) at no additional cost. Moreover, as Liferay Portal is the only enterprise portal leader on the market with no software or hardware agenda, you are not bound to using a particular IT stack and invest in only what you need for the life of your portal project.

Increasing productivity and streamlining workflow through flexible collaboration and community functionality

Companies today recognise that bringing community and collaboration functionality into the enterprise produces tremendous business value. Yet most off-the-shelf enterprise content management or portal solutions rarely offer the flexibility and agility needed to meet the growing list of organisational needs. Built upon best-of-breed open source technology, 1Tech's ECC Solutions enable organisations to fully harness a wide range of community and collaboration functionality across an array of enterprise-wide initiatives, including:

Intranets

Many organisations today are adopting Enterprise 2.0 functionality to transform static command-and-control intranets into dynamic work environments that facilitate community and collaboration. Through enabling features such as blogs, wikis, forums, RSS and email feeds, as well as search and retrieval capability, 1Tech's ECC Solutions are allowing organisations to provide more timely information to employees and facilitating more meaningful communication. Introducing community and collaboration functionality at the intranet level achieves numerous business advantages, including faster and more cost-effective workflow, and greater innovation through flexible communication solutions that connect people and ideas.

Internal communities

Today's enterprises and intranets are evolving from monolithic entities into team oriented subcultures of product lines and revenue sources that may be organised according to skill, function or department, among other criteria. 1Tech understands that building internal employee communities within the enterprise offers tremendous strategic business and operational advantages. 1Tech's ECC Solutions are designed to facilitate communication, employee interaction and feedback through industry-leading open source platform capability.

Portal implementation

As a single access point to a wide array of content and applications, portals streamline the flow of information and increase productivity. 1Tech's ECC Solutions seamlessly integrate portal functionality into existing enterprise systems to further facilitate communication, interactivity and workflow. From forums and blogs to project management tools such as task lists and calendars, our portal solutions offer tremendous value by consolidating project-specific information and easing search and retrieval capability.

Project collaboration

In today's work environment, employees, departments and teams, often dispersed across multiple physical locations, are tasked with many projects, making it difficult to collaborate, manage file versions, track progress and complete tasks on schedule. Facilitating a unified organisational vision is the key to project success. Through an array of best-of-breed open source project collaboration tools, 1Tech's ECC Solutions streamline workflow, promote effective communication among employees and, ultimately, enable teams to bring projects in on time and under budget. Whether integrating features into an existing platform or building a collaborative environment from the ground up, 1Tech customises collaboration solutions to fit your unique needs.

Capabilities

- Scalable social media and project collaboration functionality and integration for enterprise-wide intranets or specific internal communities
- Portal framework that enables users to fully leverage collaboration tools in an enterprise setting
- Rules-based document repositories that ensure version control and easy file checkin/ check-out functionality
- Integration of email and status alerts, time tracking functionality, and other tools that optimise project management efficiency
- User-friendly interfaces with Common Internet File System (CIFS) Protocol and WebDAV support
- Best-in-class security with authentication and permission levels that can accommodate varying user roles

Benefits

- Lower costs and dramatically improve ROI by redirecting IT money to revenue generating business functions
- Easily deploy, migrate and integrate content with existing enterprise applications, workflows and business processes
- Ensure business user adoption with seamless and consolidated content repositories and easy to use interfaces
- Reduce customisation and development costs with open standards and interfaces
- Streamline workflow with records and email lifecycle management across all departments, business units and offices
- Realise cost savings through zero licensing fees, no forced upgrades or vendor "lock-ins"

Featured Partners

As a Preferred Partner for Liferay, 1Tech offers extensive Liferay Portal expertise. Our portal solutions provide a robust, easy-to-maintain and cost-effective alternative to proprietary applications.
